

Riverside County Market Intelligence

CRMLS residential, January 2024 – June 2026 — prices froze; the competitive order didn't.

EMORY WILLIAMS · IDX EXCHANGE DATA ANALYST INTERNSHIP · SUMMER 2026

\$600K median close price — unchanged 2024, 2025, and 2026 H1	\$321 median price per sq ft — unchanged all three years	34 days days on market, 2026 H1 — IQR- filtered avg (31 in 2024)	98.0% sale-to-ask, 2026 H1 — IQR- filtered avg (98.6% in 2024)
---	--	--	--

This report tracks two things: what homes cost in Riverside County, and which companies sell them. The short version — prices have not moved in two and a half years, but the competition among the companies selling those homes has changed hands.

MARKET OVERVIEW

The median sale — the middle home, half sold for more and half for less — closed at exactly **\$600,000** in 2024, in 2025, and again through June 2026. Price per square foot, which corrects for the size of homes sold, is likewise frozen at **\$321** — so this is not an illusion created by bigger or smaller homes changing hands (fewer than 2% of sales land exactly at \$600,000, so it is a market-wide plateau, not a quirk of round numbers). What did change is speed: the typical home now takes **34 days** to sell, up from 31 — about 10% slower.

PRICING TRENDS

The sale-to-ask ratio compares what a home sold for against what the seller asked. At today's **98.0%**, buyers pay about \$98,000 for every \$100,000 of asking price — down from \$98,600 in 2024. Sellers are not cutting their asking prices; they are giving a little more ground in negotiation. That is the only pricing dial that has moved.

MARKET ACTIVITY

Comparing the same six months of each year: the number of homes *put up for sale* jumped from about 14,100 to **17,691 (+23%)** in early 2026, while the number that actually *sold* stayed flat — 13,065, 13,053, then 13,047. More homes are coming to market than are selling, so unsold homes are piling up and buyers have more to choose from — the classic setup for price pressure later.

New listings vs. closed sales, Jan–Jun of each year

COMPETITIVE LANDSCAPE

Every sale credits one office as the seller's representative — a "listing side," the scoreboard of this business. By that score, a Southern California independent, **Equity Union**, now runs the county's **#1 office**, twenty sides ahead of national names Coldwell Banker Realty and Compass. Among brands (one brand operates many offices), Coldwell Banker grew from 6.3% to **7.0%** of sides, Century 21 to **4.4%**, Compass to **3.9%**; Keller Williams slipped to **4.9%**. **Opendoor** — the tech "iBuyer" that bought homes for cash and resold them — has nearly left: 0.8% of listings down to **0.2%**; statewide, buy-to-resell investor flips are just 4.7% of sales. The same pattern holds across California: Compass leads the state at \$23.7B of 2024 volume, low-fee newcomers are doubling their share in affordable areas, and almost no top agents switch firms (21 of 500 one year, 16 of 495 the next) — companies win by attracting home sellers, not by hiring away star agents (statewide figures from the same data; see footnote).

Closed sides, 2026 H1 — top offices

a 20-side race for #1

KEY TAKEAWAYS

- **The price of a Riverside home hasn't moved in 2½ years** — \$600,000 median, \$321 per square foot — but each sale takes a few days longer than it used to.
- **More sellers, same number of buyers:** homes listed for sale jumped 23% in early 2026 while purchases stayed flat — inventory is building, which favors buyers.
- **Who sells Riverside changed:** a local independent, Equity Union, now edges out the national brands — #1 by a margin of just 20 sales over Coldwell Banker Realty and Compass.
- **The cash-offer experiment ended here:** Opendoor, the app that bought homes directly, fell from 0.8% to 0.2% of listings; traditional agents kept the market.
- **What to watch:** if supply keeps outrunning sales, expect buyers to win bigger discounts first (the sale-to-ask ratio), and asking prices to bend only after that.

CRMLS closed residential sales, Riverside County, Jan 2024 – Jun 2026. Supply–sales comparisons are Jan–Jun of each year (like-for-like; no annualization anywhere). 255 placeholder records excluded from rankings; sale-to-ask guarded to (0,2]; DOM and sale-to-ask tiles are IQR-filtered averages, price tiles are all-rows medians. Statewide figures (Compass volume, producer-switch counts, tier shares) are computed from the same statewide CRMLS extract with the same rules — no external sources.
